

## PCI1 Installation Instructions

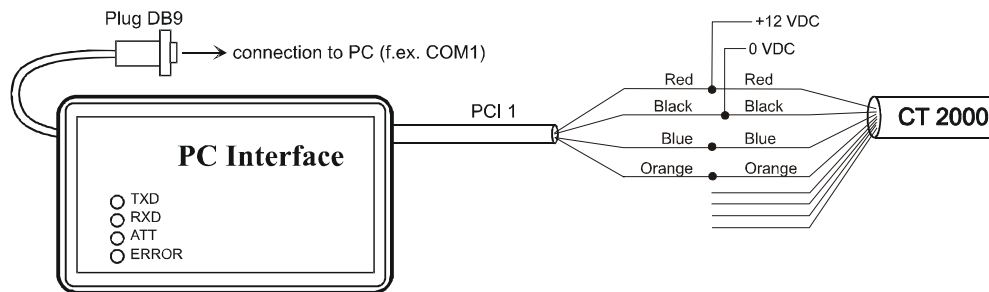

PCI1 is a communications interface which connects a PC and one or more of the following units: CT 2000 keypad, CT 2000 Proximity Reader, Box 485, Box 485-4, Parallelbox2 and LogBox2

PCI1 is used to program the CT2000 series equipment and to scan your installation for new elements. It can also be used to create a log on a PC computer.

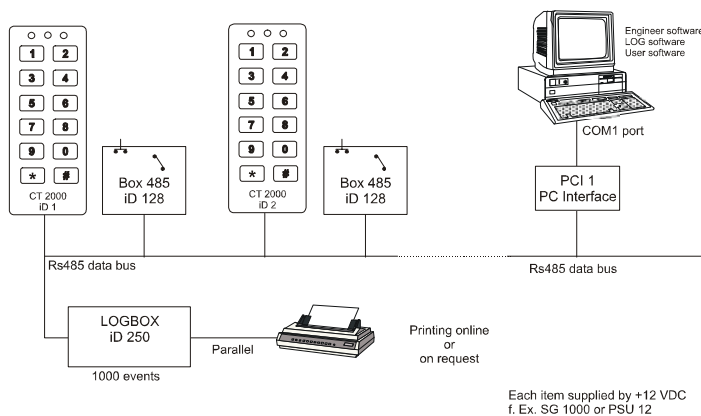

DB9 plug is used to connect to a PC COM port.

The other side of the PCI1 shall be connected as follows:

- **Red core** connect +12 VDC
- **Black core** connect 0 VDC
- **Blue core** connect A on RS485 data bus
- **Orange core** connect B on RS485 data bus

### System example
